PROFILE

Bachelor of Computer Science graduate with hands-on experience across software development, data analysis, and technical troubleshooting. Has built full-stack and low-code applications, automated manual business processes with Microsoft Power Platform, and supported users across enterprise systems in high-volume roles at Charles Darwin University. Explains technical concepts in plain language, learns new tools quickly, and is keen to start a career in IT.

EDUCATION/QUALIFICATIONS

Bachelor of Computer Science
Charles Darwin University (2022 – 2025)

TECHNICAL SKILLS

- Programming & Frameworks: Python, SQL, C#, ASP.NET, Java, JavaScript, React.js, Node.js, Django, HTML/CSS
- Databases: SQL Server, PostgreSQL, MongoDB, SharePoint Lists, ERD design, CRUD operations
- Microsoft Platform: Power Apps, Power Automate, Power Query, SharePoint, Power BI, Excel
- Data Analysis & Visualisation: Python (Pandas), Tableau, Power BI
- Tools & Platforms: GitHub, Visual Studio 2022, Jupyter Notebook, Odoo, Cisco Packet Tracer, Windows, Linux (foundational, coursework)
- IT Support: desktop upgrades and troubleshooting, multi-display setup, mobile device setup, video conferencing support, MFA set-up guidance

PROFESSIONAL INFORMATION

Student Advisor
Student & Academic Services – Charles Darwin University
March 2026 – Present

- Deliver frontline support to diverse stakeholders, resolving complex enquiries at first contact using a digital knowledge base and enterprise systems (Callista, Oracle CRM), and escalating sensitive matters through established workflows.
- Identified a manual process for issuing semester dates letters and built a Power Automate solution: staff submit a form with a student number and the output is populated with student details and correctly punctuated names, removing manual data entry and case correction.
- Repaired and updated an Excel course fee calculator (unit costs vary by field, level, credit points, and course), fixing multiple broken functions and loading current pricing to restore full functionality.
- Upgraded approximately 10 front-counter computers to a new Windows version as an assigned task, and provide hands-on support to colleagues, including multi-display and cabling fixes and video conference set-up.
- Guide students through installing and setting up multi-factor authentication on their phones at the counter.
- Carried out user testing of systems on behalf of the team and liaise with the university IT team (DTS) to escalate and resolve software issues.
- Handle confidential student information in line with regulatory and university requirements in a dual-sector environment.

Freelance Web Developer
William Sims Books
March 2025 – Present

- Design and configure a business website in Odoo, with structured pages showcasing published books and author information.
- Configure Odoo content management and newsletter modules, and keep site content accurate and consistent.
- Troubleshoot website, newsletter, and device issues for the client, including tracing a wireless mouse fault to a USB receiver plugged into a dock rather than the laptop.
- Developed documentation and delivered one-on-one training so the client can manage the system and content independently.

Full-Stack Web Developer
CodeUp NT - True Blue
December 2024 – March 2025

- Designed and built a full-stack e-commerce platform (React.js, Node.js, MongoDB) with separate user and admin interfaces for product management, order tracking, and accounts. Live: https://blackrose-frontend.vercel.app/
- Built backend APIs and structured MongoDB collections for products, users, and orders, and integrated Cloudinary for image storage.
- Worked through a phased development lifecycle across frontend, backend, and database, resolving performance and reliability issues.

Software Developer (Placement)
Charles Darwin University
December 2024

- Digitalised a paper-based business form using Microsoft Power Apps and SharePoint Lists, turning it into a structured, automated workflow.
- Gathered business requirements and mapped approval workflows with stakeholders.
- Improved data accuracy by refining the data model and ERD, linking records through unique object IDs.
- Implemented validation logic and business rules, ran structured testing, resolved configuration issues, and documented changes.

PROJECTS

Customer Churn Analysis for a Telecommunications Company (Ongoing)
(https://github.com/abedcodes13/customer-churn-analysis-for-telecommunications-company)

- Segmented 5,392 telecom customers into four groups using K-Means on tenure and monthly charges, choosing the number of clusters with the elbow method and a silhouette score check.
- Prepared the project data in Power Query: removed 302 duplicate rows (7,043 to 6,741 records), set data types, replaced labels, filtered rows, and unpivoted model results so charts could group them.
- Built a Power BI dashboard covering customer segments, churn patterns by tenure and contract, and model performance (confusion matrix, threshold trade-off, comparison with a baseline).
- Used the dashboard to show that new customers on high monthly charges churned at 48.9%, against 5.0% to 25.4% in the other segments.
- Documented the clustering workflow in a reproducible Jupyter notebook, set up the team's GitHub repository, and contributed the segmentation findings to the final report

Customer Behaviour Analysis
(https://github.com/abedcodes13/customer_behaviour)

- Cleaned and explored customer shopping data with Python (Pandas) and analysed sales, product categories, and purchase behaviour using PostgreSQL queries.
- Built an interactive Power BI dashboard with KPIs, charts, and filters, and summarised insights on customer segments and spending trends.

Sales & Customer Dashboards
(https://shorturl.at/UouAV)

- Developed interactive Tableau dashboards using calculated fields, parameters, and filters to analyse sales and customer data.
- Built KPIs (sales, profit, order volume, sales per customer) with year-over-year comparisons, plus drill-down and cross-filtering by category and geography.

COURSES

- Microsoft Power Automate Essential Training (January 2026)
- Learning Data Analytics: 1 Foundations (December 2025)
- C# and .NET Essential Training (September 2025)
- Learning Jira (Cloud Edition) (September 2025)

AWARDS

Academic Excellence Award – C Programming
October 2025

Academic Excellence Award – Research Project
May 2025

VOLUNTEERING/STUDENT CLUBS

Charles Darwin University Sports Club
August 2024 – June 2025
Co-founder/President
Responsibilities included:

- Led a student sports club organising weekly sports events attended by 30+ students, fostering teamwork and social engagement.
- Coordinated two major tournaments with 90+ participants, communicating with student group leaders and sponsors to ensure smooth event delivery.
- Supported new team members in managing social media, handling club funds, and conducting risk assessments to maintain organised operations.

LICENSES

- NT C Class Drivers Licence
- Working with Children Check (OCHRE)
